🩺 CLINICAL NOTES & ALERTS

- ⚠️ **VACCINE REACTION ALERT:** Patient experienced mild facial swelling and lethargy approximately 4 hours after the **Leptospirosis** booster on May 20, 2021.
- **Protocol for future visits:** Pre-medicate with Diphenhydramine (Benadryl) 50mg intramuscularly (IM) 15 minutes prior to administration of Leptospirosis vaccine. Separate Lepto from DAPPv by at least 2 weeks.
- **General Health:** Patient is in excellent body condition (BCS 5/9). Auscultation of heart and lungs normal. No orthopedic abnormalities noted.

AUTHORIZATION

I certify that the above vaccinations were administered to the patient described in this report in accordance with standard veterinary medical practices.
