OFFICIAL MEDICAL RECORD: FOLLOW-UP & LIFESTYLE CONSULTATION

Date of Current Visit: June 10, 2024
Previous Visit Reference: May 24, 2024 (Comprehensive Exam & Chart Review)
Visit Type: Preventative Care Follow-Up / AAHA Protocol Adjustment

📋 PATIENT DEMOGRAPHICS

Patient Name:	**Barnaby**
Date of Birth (DOB):	May 14, 2020 (Age: 4 yrs, 1 mo)
Species / Breed:	Canine / Golden Retriever
Sex / Alter Status:	Male / Neutered
Weight:	68.8 lbs (31.2 kg) *(Up 0.4 lbs from May 24 visit)*

👤 OWNER INFORMATION

Name: Eleanor Vance
Address: 42 Birchwood Lane, Springfield, ST 12345

🌲 ENVIRONMENTAL & LIFESTYLE ASSESSMENT

As requested during our May 24th exam, a detailed lifestyle assessment was conducted today to determine if Barnaby's preventative care plan fully aligns with the latest AAHA Canine Vaccination Guidelines.

Environment Category	Owner Report / Risk Assessment
Primary Housing	**Low Risk:** Primary indoor dog. Has free access to a fully fenced suburban backyard via a doggy door. No exposure to wildlife at home.
Socialization / Urban	**High Exposure:** Barnaby is a highly social dog. He visits the local community dog park 2–3 times per week and regularly attends an indoor doggy daycare when the owner travels for work. He shares water bowls and toys with unknown dogs.
Travel	**Low Risk:** Stays within the local suburban area. No interstate travel or wilderness hiking reported at this time.

💉 VACCINATION RECORD (CURRENT VISIT)

Based on today's lifestyle assessment highlighting high-density socialization, the following non-core vaccine was discussed and administered today.

*Clinical Note: Barnaby previously received the Oral Bordetella vaccine. Per the **AAHA Guidelines**, dogs in high-turnover social environments (daycares/parks) should also receive mucosal (intranasal) protection against Canine Parainfluenza. While Barnaby's core DAPPv injection includes systemic parainfluenza, the intranasal CPiV vaccine is administered today to provide targeted local mucosal immunity and actively prevent viral shedding.*

Table 1: New Vaccination Administered Today (Follow-Up)

Vaccine Type	Manufacturer / Lot #	Date Administered	Next Due Date	Administered By
Canine Parainfluenza (CPiV)	Zoetis / #IN-2284-C	Jun 10, 2024	**Jun 10, 2025**	Dr. S. Jenkins

Vaccine Type	Manufacturer / Lot #	Date Administered	Next Due Date	Administered By
(Intranasal - Mucosal)				

Table 2: Status of Previous Vaccinations

Follow-up reference to the comprehensive report generated on May 24, 2024.

Core/Non-Core Vaccine	Current Status	Next Action Required
Rabies (3-Year)	**Current**	Due Oct 10, 2026
DAPPv (3-Year) *(Includes injectable CPiV)*	**Current**	Due May 15, 2026
Bordetella (Oral)	**Current**	Due Nov 01, 2024
Canine Influenza (H3N2/H3N8)	**Current**	Due Nov 01, 2024
Leptospirosis (4-way)	*Overdue*	Scheduled for next week using pre-medication protocol (Benadryl) due to historic facial swelling.
Lyme Disease	*Overdue*	Will be administered alongside Lepto booster next week.

🩺 CLINICAL NOTES & FOLLOW-UP PLAN

- **Objective:** Vitals normal (Temp: 101.0°F | HR: 86 bpm | RR: panting). Physical exam is unchanged from the May 24th visit; patient maintains excellent body condition.
- **Assessment:** Healthy adult canine. Lifestyle assessment indicates a high risk for Canine Infectious Respiratory Disease Complex (CIRDC) due to frequent daycare and dog park attendance.
- **Plan / Client Education:**
  i. Administered Intranasal CPiV today into both nares. Patient tolerated the administration well. Mild sneezing over the next 24-48 hours is a normal immune response to the mucosal

vaccine and was discussed with the owner.

ii. Barnaby is now fully compliant with AAHA recommendations for high-socialization canines.

iii. **Next Follow-up Appointment:** Return on *June 17, 2024* to administer the overdue Lepto and Lyme vaccines (utilizing Diphenhydramine 50mg IM pre-medication 15 mins prior, as noted in the May 24th allergy alert).

AUTHORIZATION

I certify that this follow-up assessment was conducted and the above vaccination was administered in accordance with current AAHA Canine Vaccination Guidelines and standard veterinary medical practices.
